Solar energy for homes amman

At Tayar for renewable energy, our EPC (engineering, procurement, and construction) team offers highly efficient and reliable solar energy systems and solutions to clients in Jordan as well as the MEA region. We present top-of-the-line working solutions that include the Design, build, setup, installation, operations, and maintenance backed by well-trained and experienced engineers in the industry.

We add reliability, expertise, high-quality abundance, and cost-effectiveness to our clients, we are active across all renewable energy sources, and we integrate our technologies and activities to maximize energy output and reduce the Levelized cost of electricity (LCOE) for our clients. By accepting full value chain responsibility and standing behind the performance of the entire power plant, we maximize the value of our customers' investments while minimizing their risk.

Our experienced team of developers, professional engineers, and operation specialists partner with third-party developers, independent power producers, and utilities to develop, finance, design, construct and operate the highest quality utility-scale renewable energy projects in the industry.

Engineer sustainable future, as the trusted sustainable partner, creating valued and efficient energy solutions that are granted with passion, expertise, teamwork, and relentless focus on customer satisfaction.

Provide the means to translate the priorities of today into tangible and sustainable actions to benefit our clients, people, communities, and the planet, through clean energy solutions.

Solar energy is a simple and environmentally friendly way to produce electricity for yourself locally. The resources needed to generate electricity are available free of charge around the world, and the production itself does not affect the health or well-being of people.

AMMAN -- The Energy Ministry's Jordan Renewable Energy and Energy Efficiency Fund (JREEEF) on Monday announced the completion of the second phase of the 2022-2023 programme to encourage the residential use of solar panels.

JREEEF Director Rasmi Hamza stated that in the second phase, 4,500 households received support for solar panels, while 1,500 households received support for solar water heaters.

JREEEF is planning a new phase for 2023-2024 with the same mechanisms and conditions, in cooperation with banks and local associations, with an official announcement expected in the next two months, he added.

Since the fund became active in 2015, it has provided approximately 50,000 Jordanian households with partial or full subsidies for solar water heating and solar panel installations. In addition to residential initiatives, the

fund offers programmes for various sectors, including businesses in the industrial, tourism and agricultural sectors, religious institutions, public schools, municipalities, health centres and hospitals. The fund also assists in capacity building and promotes extensive awareness campaigns on the benefits of solar energy.

The Jordan Times is an independent English-language daily published by the Jordan Press Foundation since October 26, 1975. The Jordan Press Foundation is a shareholding company listed on the Amman Stock Exchange.
