Installing a battery could reduce your electricity bills, especially if you're on a time-of-use tariff such as Economy 7. You could be charging on cheap overnight electricity and using the battery during the expensive hours.

Solar panels are a great way to generate electricity during the day, but they don't work at night when you need energy the most. Installing a battery can help you make the most of the energy your panels produce. Without a battery, you'll have to rely on the national grid for electricity at night, which can be expensive. However, with a battery, you can store any excess energy generated during the day and use it at night when you need it most. This will help you reduce your reliance on the grid and save money on your electricity bills.

The Sunsynk Connect app helps you get the most out of your solar panel and battery system. The app tracks in real-time how much energy your panels are generating. It gives you the information you need to increase your savings and reduce your energy spending. Features of the app include:

The battery system is designed to be wall or ground-mounted - and is usually installed in the loft of your home. For homes without a loft, the installer will be able to give you alternative options, such as the garage or under the stairs.
