

Solar panel inverter brands

Solar panel inverter brands

To identify the best solar panel and inverter brands for bankability, we looked to homeowners like you, and which equipment they selected over the last year. After all, nothing says trust like buying thousands of dollars in product.

Now, there is something to be said about panel availability and supply chain disruptions in 2022 and 2023. Simply put, installers weren't always able to stock certain brands, which limited choices for consumers.

But, there's also something to be said for being able to supply product in those conditions, which REC, Q Cells, and Panasonic were clearly able to do. Let's take a look at the three best solar panel brands of 2024 to see what makes them stand out to homeowners and installers.

Q Cells" recently announced its \$2.5 billion investment in a manufacturing complex in Georgia, due largely to incentives created by the Inflation Reduction Act. It will be interesting to see how having a manufacturing presence in the United States affects its brand equity in the future.

It is worth noting that Panasonic shuttered its internal solar panel manufacturing division in 2022 and will continue selling Panasonic-brand panels through a third-party manufacturer. It will continue to honor the warranties on panels for existing customers.

While there are some changes happening "behind the scenes," everything about how installers and consumers experience Panasonic Solar is staying the same, including the 25-year warranty, commitment to product quality and high level of service people have come to expect from us.

Inverters are a crucial and often overlooked part of a home solar system. After all, solar panels produce DC electricity and your house runs on AC. Inverters are the forgotten middle child that makes the equation work.
