

Solar water heaters in ghana

Solar water heaters in ghana

Certified energy efficiency: Heat absorption panels achieve maximum performance according to EN 12975 standards through rigorous testing at reputable research centers. The quality of new products meets the standards of inspection organizations such as Solar Keymark and P-ICM.

Longer, safer lifespan: Toughened glass absorbs solar energy, reflecting the sun's rays to a minimum, consuming less energy. Absorbed solar energy is retained by the prismatic surface, creating a "greenhouse effect" inside the heat-absorbing plate. Through testing, the product has maximum efficiency and is absolutely safe even in hail conditions.

It means that you can use filtered water / radiator coolant to act as the heating medium, which keeps the heating panel clear of unwanted water chemicals and high alkalinity which can calcify and block your solar water heating system. Power & Co. offers sales and installation of ARISTON solar water heaters in Ghana, either on the roof or ground level.

Natural circulation for production of sanitary hot water system. Kairos Thermo HF range, thanks to its horizontal design and your semi-integrated accumulator, as any other solar kit impact minimized in housing because it reduces by 30% the maximum height.

We excel at determining effective cost saving measures that will improve the longevity of your equipment and the quality of performance! For more information, to discuss service requirements, or other electrical issues call our 24hrs hotline: +233 (0)243383838 or send us a message.
