

Solaredge installer app

Solaredge installer app

The company's new mobile app is designed to combine all operations for solar installers, from installations and commissioning to management and servicing, in one streamlined platform.

SolarEdge Go is the company's first mobile app to feature all operations for solar installers, from installation and commissioning processes to management and servicing, on one platform.

It will gradually introduce remote access features, SolarEdge says, including direct access to inverter settings and remote diagnostics. Installers will be able to create, edit or select a site and register solar inverters, adjusting permissions for remote site access as needed.

The app is expected to help reduce commissioning time via a fast power optimizer pairing feature and the ability to schedule upgrades after commissioning. Installers will also be able to contact customers directly through the app.

SolarEdge UK Country Manager Christelle Barnes says installers will be able to work faster, smarter and with more flexibility using the app. "Our installers remain central to everything we do," Barnes said. "As such, we continue to dedicate significant resources in order to create best-in-class tools that improve efficiencies for them throughout the installation process."

Your personal data will only be disclosed or otherwise transmitted to third parties for the purposes of spam filtering or if this is necessary for technical maintenance of the website. Any other transfer to third parties will not take place unless this is justified on the basis of applicable data protection regulations or if pv magazine is legally obliged to do so.

You may revoke this consent at any time with effect for the future, in which case your personal data will be deleted immediately. Otherwise, your data will be deleted if pv magazine has processed your request or the purpose of data storage is fulfilled.
