

United kingdom energy storage for demand response

United kingdom energy storage for demand response

We bring together eight activities required to deliver the plans, markets and operations of the energy system of today and the future. Bringing these activities together in one organisation encourages holistic thinking on the most cost-efficient and sustainable solutions to the needs of our customers.

The SEP team work in partnership with governments, Ofgem, industry and wider stakeholders to guide Great Britain on what infrastructure and sources of electricity are required to securely accelerate the transition away from fossil fuels into new energy technologies, including renewable energy.

Security of Supply analyses where the energy we need over the short, medium and long-term will come from. In doingso it assesses a wide range of factors that could affect our supply of energy, enabling early actions and decisions to ensure we can meet future demand.

From hospitals to households, telecoms to transportation, our society relies on electricity. Our control centre makes sure there is always a reliable and safe supply as we move megawatts around the country.

We will deliver efficient system access for Generation and Demand projects, so that those projects that are first ready can be first served - delivering the energy system to meet net zero and facilitating economic growth by connecting new and existing industries.

Our energy system is complex, with an increasing number of interconnections. This means that disruption to one part can have implications for another. But this complexity also provides us with more options to mitigate problems.

We will develop comprehensive and independent insights across the entire energy system, offering clear recommendations to policy makers, industry decision makers and leadership across our organisation on how to accelerate energy transition progress.

Ever wonder how much gas and electricity we use in Great Britain? View our monthly insights into which generation sources provide Great Britain's electricity and learn how much we use each month.

We're the experts in electricity - how much we use, where it comes from, and how it travels into homes and businesses. Understanding how much electricity we consume, and which devices are most power-hungry is no easy task.

Gas has been a part of Great Britain's energy mix since the Victorian Era. At NESO, we have been supporting the UK Gas system for many years through our supply and demand forecasts. We are building our expertise in

United kingdom energy storage for demand response

gas as we strategically plan the gas system of the future.

Are you a balancing provider looking to supply services to us, trying to find the latest Grid Code, or TNUoS charging guidance? Find all the information you need including our operational data, forecasts, and reports designed to help you make efficient decisions.

Our team of code administrators oversees all aspects of the code modification processes and related meetings. So whether you're new to the process, or experienced in the way it all works, we'll help you get to the information you need.
