## Upcoming Annular Solar Eclipse in Ghana

Ekapmedia is a leading news blog that brings you the latest and most comprehensive coverage of national and foreign news, entertainment, sports, education, business, agribusiness, lifestyle, traditional culture, tourism, history, profiles and job opportunities. Our mission is to provide you with the most accurate and up-to-date information, so that you can stay informed and make informed decisions.

An annular solar eclipse is a rare celestial event that occurs when the Moon passes between the Earth and the Sun, but the Moon's apparent diameter is smaller than the Sun's.

This phenomenon can only be seen from a narrow path on the Earth's surface, which is why annular solar eclipses are considered rare. The path of the 2027 annular solar eclipse will pass through parts of Africa, including Ghana, as well as parts of South America, Antarctica, and the South Atlantic Ocean.

Looking directly at the Sun, even during an eclipse, can cause permanent eye damage. Special eclipse glasses or filters, or indirect viewing methods, such as using a pinhole camera, should be used to safely view the eclipse.
