

Utility scale battery energy storage training

Utility scale battery energy storage training

Battery energy storage systems power everything from our phones to cars, houses, and even retail and industrial facilities. Batteries can store electricity by converting it into stored chemical energy, which is converted back to electricity as needed.

Generally speaking, batteries for a home or business solar energy system include a built-in inverter to change the DC current generated by solar panels into the AC current needed to power appliances or equipment.

Fundamentals of Battery Energy Storage System (BESS) is a 3-day training course. A Battery Energy Storage System (BESS) is a technology developed for storing electric charge by using specially developed batteries.

Battery storage is a technology that enables power system operators and utilities to store energy for later use. A BESS is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

Fundamentals of Battery Energy Storage System (BESS) training is suitable for engineers, managers, supervisors, technicians, installers, O& M as well as other professional and technical personnel.
