

Wheelchair batteries

Mobility scooter batteries are the lifeblood of these essential vehicles, providing the power needed for individuals with mobility challenges to move freely and independently. Typically, these batteries are rechargeable and come in various types, including sealed lead-acid (SLA), gel, and lithium-ion. SLA batteries are commonly used due to their affordability and reliability, although they are heavier and bulkier compared to lithium-ion alternatives.

Gel batteries offer a maintenance-free option with better durability against vibrations and shocks making them suitable for rugged terrain. Lithium-ion batteries are lightweight, compact, and provide longer ranges per charge, enhancing the overall mobility experience. Regardless of the type, proper care and maintenance, such as regular charging and avoiding extreme temperatures, are crucial to ensuring optimal performance and longevity of mobility scooter batteries.
