Wireless charging bag factories

Our wireless charger factory is located in Shenzhen, China. We have been developing wireless chargers since Feb 2019, and now we have 7 workshops to manufacture wireless chargers exclusively. We only sell high-quality wireless chargers, which are widely used in smart phones, laptops, kitchen appliances and cars, you can wholesale or customize from our full collection of products.

Wireless charging, also known as inductive charging or magnetic charging, is a convenient and cable-free way to charge your electronic devices. We wholesale high quality and compatible Qi wireless chargers, most of them are used as charging accessories for iPhone and Samsung mobile phones. Our wireless charger supports 5W & 15W power output and can charge the phone quickly. If you're looking for wireless chargers manufacturer that's cheap but delivers the power you need, please feel free to contact us.

ByteCable is a manufacturer and wholesaler of high quality Apple Magsafe accessories. Our products are designed to provide a safe and easy charging experience for iPhone, AirPods and Mac Book users. We are the first factory in China to manufacture Magsafe products, whether you're looking for a new Magsafe 3 cable or Magsafe accessories, we've got you covered. We also support customized Magsafe gifts accessories and packaging, please feel free to contact us for more info.

Made for MagSafe; features Apple's official MagSafe technology. Such products will be marked with a Made for MagSafe; badge, which means they've been developed and rigorously tested according to MFi guidelines for Apple products. Wireless chargers with MagSafe can up to 15W power for iPhones and 140W power for MacBook(2021).

"MagSafe Compatible" meets industry standards and provide the convenience and precision of a snap-on attachment using a magnetic ring, but without Apple's MagSafe technology inside, so wireless charger can only charge at 7.5W for iPhone. These products meet our highest standard, completely safe to use with cell phones.

Magsafe is a new magnetic charging standard that Apple first introduced on MacBook Pro in 2006 to provide a safety feature. Starting with the iPhone 12 series, Magsafe has also been used in iPhone. Now Magsafe is Apple's generic name for iPhone and Macbook charging.

iPhone: You can use MagSafe to charge an iPhone 12 or 13 at up to 15W, while Qi chargers are limited to 7.5W. If charging headphones, like Apple's AirPods or AirPods Pro, the maximum power is 7.5W.

fuelled by sugar. Until then, the best tool for cordless current is a wireless charger. See, while most flagships still require a dose of mains power to brim their batteries on a daily basis, boosting your blower doesn't mean you need to plug it in.

From zapping mats to MagSafe stands, the top charging docks deliver smartphone sustenance without a wire in sight. So whatever device you have to refill, add one of these power pads to your desk for drop and flow convenience.

Like a watering can, Logitech's Powered Stand has a descriptive denomination. And like a watering can, it packs the potential to give life. Rather than adding aqua to your anthuriums, though, it can zap all sorts of smartphones with up to 10W wireless power.

There's no spout, but the portrait podium's supportive design will keep your device standing tall. And provided it's 3mm or thinner, there's no need to remove your phone from its case.
